HELP YOUR STUDENTS MAKE A BIGGER SPLASH IN LIFE SCIENCES WITH THE SLAS JOURNALS.

Existing materials, such as the introductory section of a thesis, often can be built into very successful review articles by grad students and postdocs.

Well-researched and well-written reviews are the most widely-read and most highly-cited articles published in SLAS journals. Encourage your team members to publish review articles to:

- Build their CVs with high-quality achievements.
- Heighten their online profiles in PubMed, ORCID, Google Scholar, Kudos, SLAS and many other indexing services.
- Gain first-hand knowledge and experience with the peer-reviewed publishing process.
- Understand the values and priorities of practicing life sciences professionals.
- Become recognized contributors to a prestigious international research community.

HAVE AN IDEA? E-mail nhallock@slas.org to ask the SLAS editors if they feel your idea is appropriate before your students invest too much time and effort developing it. If your idea interests the editors, they’ll encourage you to proceed and may offer some guidance to help focus the review to enhance alignment with SLAS editorial priorities.

SLAS Discovery (Advancing Life Sciences R&D) and SLAS Technology (Translating Life Sciences Innovation): Backed by the high-quality education standards of SLAS. Rigorously peer-reviewed. PubMed/MEDLINE-indexed. NO article processing charges (APCs) for regular publication. Open access options are available.
